LMEPP website

HEMAP prepares students for staff and executive positions in organizations and institutions involved in health care provision.

The programme aims at developing skills and expertise in the field of health economics and policy, health care management, health law and regulations.

The relevance to society of **health care** far exceeds the increasing economic prominence of this sector in the economy.

Such a relevance calls for staff and executives in health care organizations to be aware of **fundamental economic trade-offs, legal and regulatory restraints, ethical concerns** affecting the organizational logic in this sector.

The course in numbers
