# Introduction

Our modern lifestyle relies on raw materials. From the iron and steel of our railway infrastructure to the gold and silver in the circuitry of smartphones: raw materials are everywhere. The transition to a climate neutral future requires cobalt for electric vehicles, lithium for rechargeable batteries, silicon for solar panels, and rare earth elements for wind turbines that generate renewable energy.

As the world grows smaller and more hyper-connected, the impact of society on the Earth has never been more visible. It is now clear that we need to shift to a circular economy in order to responsibly use the Earth's finite resources. But what can just one individual do to help? More than you think! Real change requires courage, innovative thinking, and collective action – the same skill set that EIT RawMaterials Academy looks for in prospective students. Are you ready to mine your raw talent, help shape a more circular, green economy, and create sustainable solutions for tomorrow?

# What do we offer students?

EIT RawMaterials Academy offers students a unique opportunity to learn in a dynamic environment, focusing on real-life challenges. Awarded by the EIT (European Institute of Innovation and Technology), a body of the European Union, the EIT Label is a certificate of quality that is granted only to excellent educational programmes at the master's and doctoral level.

As a student of an EIT-Labelled programme from EIT RawMaterials Academy, you'll be part of the largest European raw materials network with more than 300 organisations as partners, including higher education professionals, researchers, and industry experts from over 20 European countries. As an EIT Label student, you will be welcomed into this network and will champion and contribute to the EIT RawMaterials goals of finding new, innovative solutions to secure the sustainable supply of raw materials across the value chain: from exploration, mining and mineral

processing to recycling, substitution and a circular economy. EIT RawMaterials aims to equip a new generation of innovators in Europe with the necessary entrepreneurial mind-set for designing and delivering materials solutions. You'll also get the chance to collaborate internationally and develop sustainable solutions to pressing economic, environmental and societal challenges. And long after you graduate, you can stay connected via EIT RawMaterials Alumni.

JOIN AN EIT-LABELLED PROGRAMME AND BECOME A  
GLOBAL GAME-CHANGER, EQUIPPED WITH THE KNOWLEDGE,  
SKILLS AND EXPERIENCE EMPLOYERS SEEK.

# What to expect?

An aerial photograph of a quarry or mining site. The central part of the image shows a large, excavated area of reddish-brown earth and grey rock. A large piece of heavy machinery, possibly a conveyor system or a large drill, is visible in the lower-left quadrant of the quarry. The surrounding area is covered with dense green trees and some bare, greyish branches, suggesting a forested area adjacent to the quarry. The overall scene is a mix of natural and industrial elements.

→ Thesis internship placements at leading European companies

→ Membership of the EIT RawMaterials Alumni community

→ 'Learning by doing' with challenge-based courses that focus on real-life problems

→ Study tours and visits to innovative companies and industrial sites

→ Exciting new ways of learning: online courses, virtual and augmented reality and MOOCs

→ Courses designed to nurture start-up ideas

→ Course modules dedicated to entrepreneurship and innovation skills

→ EIT RawMaterials Innovation support: business plan competitions, innovation bootcamps and funding

→ Expertise in a raw materials discipline – a comprehensive understanding of the entire raw materials value chain

→ EIT RawMaterials summer schools and interdisciplinary courses

→ European mobility – study in at least two European countries

# Exclusive activities and support for EIT-Labelled students

Students on EIT-Labelled master's programmes within the EIT RawMaterials Academy receive a range of additional opportunities to boost their innovation and entrepreneurship skills, grow their network in the raw materials sector and gain the experience they need to thrive.

These exclusive events bring together EIT-Labelled students from across the Master School, and form the basis of your shared learning experiences, making you a full member of the EIT RawMaterials community.

## SEMESTER 1

- **Label Induction Days**  
Meet the EIT RawMaterials Academy and learn how to get involved in our community and access the many opportunities on offer. Sign up for EIT RawMaterials Alumni and start growing your network.
- Vote for your representative on the Label Student Board, or stand for election!

## SEMESTER 2

- **Label Start-Up! Days**  
Get together with 100 Label students and learn from EIT RawMaterials supported start-ups. Hear about the experience of setting up a company in the raw materials sector, and network with entrepreneurs.
- All costs covered by EIT RawMaterials.

## SEMESTER 3

### → The RACE

The Raw and Circular Economy Expedition (RACE) is a challenge-based summer school for 70 students from around the world, taking place over two weeks in different European countries. Find out more at [race.eitrawmaterials.eu](http://race.eitrawmaterials.eu).

- Some participation costs covered by EIT RawMaterials for Labelled students selected for participation.

## SEMESTER 4

### → Label-Launch!

Celebrate completing your EIT-Labelled Master's programme. Take part in matchmaking events with EIT RawMaterials industry partners and start-ups, and make new connections with raw materials professionals.

# Do you have a raw materials business idea?

EIT RawMaterials offers a range of support for individuals and companies with innovative business ideas, including:

## Lab2Market

- A three-term entrepreneurship training programme, exclusively for EIT Label students and graduates. Lab2Market will help you come up with a business idea, create a start-up and connect you with investors and customers. Grants are available for selected participants.

## EIT Jumpstarter

- One of Europe's top pre-accelerator programmes, to help you develop your business idea and understand what's needed to create a successful start-up.

## EIT RawMaterials Accelerator

- A three-stage accelerator programme to help start-ups with a developed product to bring their solution to the market.

## Booster Call

- Financial and network access support for start-ups and SMEs in the raw materials sector.

# EIT RawMaterials Alumni

From the moment you join an EIT-Labelled Master's programme in the EIT RawMaterials Academy, you are eligible to join EIT RawMaterials Alumni. This organisation provides a great opportunity to connect with the EIT RawMaterials ecosystem and varied EIT RawMaterials activities, such as business idea competitions, start-ups, professional development courses and Master's and PhD programmes.

It is run by and for its members, who can take part in events, and develop their careers through internships and job offers, networking activities and much more, forming a hub for a diverse range of raw materials students, academics and professionals. Furthermore, EIT RawMaterials Alumni provides you with a connection to the wider EIT Alumni community and alumni events around Europe.

# Programmes

Nine Master's programmes within the EIT RawMaterials Academy hold the EIT Label. Graduates from all EIT-Labelled programmes are awarded a degree from one or more of the participating universities, with an EIT Label Certificate confirming graduation from an EIT-Labelled programme.

## AMIR

Master in  
Advanced Materials:  
Innovative Recycling

## AMIS

Master in Advanced  
Materials for Innovation  
and Sustainability

## EMerald

Master in Resources  
Engineering (Innovative  
Education in Geometallurgy  
and Circular Economy)

## MEITIM

Master in Entrepreneurship,  
Innovation and Technology  
Integration in Mining

## RaMES

Master in  
Raw Materials Exploration  
and Sustainability

## RaVeN

Master in  
Mining Engineering

## SINReM

International Master  
of Science in Sustainable  
and Innovative Natural  
Resource Management

## SUMA

Master in  
Sustainable Materials

## TIMREX

Master in  
Mineral Exploration

AMIR master

# Master in Advanced Materials: Innovative Recycling

Awarded the EIT Label in 2018

## THE CHALLENGE

Materials are the building blocks of the modern global economy and are instrumental for the transition to a green, circular and carbon-neutral economy. Thirty of these materials have been defined by the EU as critical, meaning that they are both highly important to the EU economy and in dangerously low domestic supply. Accessing the known primary raw material sources has become more challenging, while amounts of industrial waste and end-of-life-products are rapidly increasing. These waste streams contain secondary raw materials,

many of which are critical and can be recovered, diversifying supply and delivering usable materials to meet increasing demands. To achieve this, we need skilled professionals with advanced technical knowledge of recycling, an understanding of the full raw materials value chain and the skills required to transform knowledge into solutions and business. The AMIR master's programme was created to fulfil this need by educating future international professionals who will develop new routes for materials recycling.

With the support of the  
Erasmus+ Programme  
of the European Union

<b>Double Diploma</b>	Graduates of the AMIR programme will be awarded a single or double Master of Science degree, depending upon their chosen pathway. Graduates will also be awarded the EIT Label Certificate.
<b>Credits</b>	120 ECTS, 24 months
<b>Language of Instruction</b>	English
<b>Starts in</b>	September
<b>Requirements</b>	The programme is aimed at candidates who have a bachelor's degree in Engineering and Environmental Sciences with advanced knowledge in Chemistry (minimum 3 years of study or 180 ECTS credits), or a bachelor's degree in Chemistry, Physical-Chemistry, Materials (or Matter) Sciences. Candidates must also demonstrate English language proficiency.
<b>Tuition fees</b>	Please consult the AMIR website ( <a href="http://www.amir-master.com">www.amir-master.com</a> )
<b>Application Period</b>	For more details, please check <a href="http://www.amir-master.com/apply/">www.amir-master.com/apply/</a>
<b>Scholarships</b>	For students beginning in September 2023, EIT Label scholarships from EIT RawMaterials of €13,500 per eligible student are available. For information on how EIT Label scholarships will be awarded and who is eligible, please contact the coordinating university directly: <a href="mailto:amir-master@eitrawmaterials.eu">amir-master@eitrawmaterials.eu</a> . Additional scholarships and grants may be available – visit <a href="http://www.amir-master.com">www.amir-master.com</a> for details. A number of Erasmus Mundus Joint master's degree scholarships are available, covering full tuition fees and living expenses.

I chose AMIR because I wanted to play a pioneering role in the responsible utilisation of secondary raw materials. The programme has equipped me with skills in several end-of-life options for materials and taught me strategies to incorporate sustainable designs early in material research. The highlight of the programme has been the enjoyable experience of attending various EIT RawMaterials Label events, which enabled me to build a large network of like-minded sustainability experts and helped me to develop life-long friendships while travelling across Europe."

— **HAMZA JAMIL, PAKISTAN (AMIR)**

#### PARTICIPATING UNIVERSITIES

##### University of Bordeaux

University of Bordeaux

[amir-master@eitrawmaterials.eu](mailto:amir-master@eitrawmaterials.eu)

[www.amir-master.com](http://www.amir-master.com)

# Programme Structure

**YEAR 1** of the master's programme takes place at the University of Bordeaux, NOVA University Lisbon or the University of Miskolc. Students learn about general and technical aspects of the raw materials value chain (general chemistry, material science, the lifecycle of materials), as well as about the main learning outcomes expected from an EIT-Labelled programme: sustainability, intellectual transformation, value judgments (ethical, scientific and sustainability challenges), creativity, innovation, leadership and entrepreneurship. In addition, a new module focusing on batteries has been introduced into the programme at Bordeaux, in line with the key trend of electrification in the development of sustainable materials for future mobility.

**YEAR 2** takes place at one of the other partner universities, allowing students to gain specialist knowledge in their area of interest. This is followed by an industrial internship and completion of the master thesis.

# Master in Advanced Materials: Innovative Recycling

Awarded the EIT Label in 2018

## PROFESSIONAL PROFILES AFTER GRADUATION

Graduates of the AMIR programme will be fully equipped to take on professional roles in the recycling sector:

- Process optimisation
- Materials design
- Plant administration
- Project administration

Furthermore, the skills gained are widely required across sectors, including information and communication technologies, building construction, energy, machinery tools, and mobility. Graduates also obtain the necessary skills and knowledge to set up their own company or work in sales and marketing. Finally, doctoral studies are another possibility, and graduates of the AMIR programme will be fully equipped to enter PhD programmes in the recycling sector to pursue engineering careers or academic research.

## ARE YOU A STUDENT WHO IS:

- Interested in the full value chain of raw materials?
- Keen to make a difference in confronting the challenges surrounding waste and contributing to the development of sustainable solutions?
- Motivated to spend time working with top companies and research organisations in the recycling sector?
- Driven to become an entrepreneur or intrapreneur who makes innovation happen?

# Master in Advanced Materials for Innovation and Sustainability

Awarded the EIT Label in 2016

## THE CHALLENGE

As global and EU populations and subsequent welfare demands increase, consumption per capita is also on the rise. In the EU especially, consumption has outpaced production, particularly with respect to the more complicated, resource-intensive technologies and products that have become part of daily life. As a result, recycling is of utmost importance to diversify our supply sources and meet society's needs.

AMIS is a master's programme in Advanced Materials for Innovation and Sustainability. The primary objective of the programme is to provide students with an understanding of the full raw materials value chain and a mind-set for innovation and entrepreneurship focusing on sustainability. AMIS tackles this challenge by focusing on three themes – all of which are central themes of EIT RawMaterials:

- Substitution of critical or toxic materials in products for optimised performance
- Material chain optimisation for end-of-life products
- Product and services design for the circular economy

AMIS aims to train T-shaped professionals – experts in a particular raw materials discipline with an overview of the entire raw materials value chain. T-shaped professionals also work closely with industry professionals to explore how innovation and entrepreneurship can strengthen the market uptake of raw materials solutions.

Through the programme, AMIS students will become experts in the field of raw materials, particularly in sustainable functional materials, while gaining a holistic view of the value and process chain.

<b>Double Diploma</b>	<p><b>From two of the following:</b></p> <ul style="list-style-type: none"> <li>– Grenoble INP: Master Science et Génie des Matériaux</li> <li>– Aalto University: Master of Science (Technology): Functional Materials for Global Challenges</li> <li>– TU Darmstadt: Master of Science in Materials or Master of Science in Physics or Chemistry</li> <li>– University of Bordeaux: Master Sciences et Technologies, mention CHIMIE, Advanced Hybrid Materials: Composites and Ceramics by Design</li> <li>– University of Liège: Master Sciences Physiques or Master Sciences Chimiques</li> <li>– Riga Technical University : Master Degree of Engineering Science in Materials Science and Nanotechnology</li> <li>– EIT Label Certificate</li> </ul>
<b>Credits</b>	120 ECTS, 24 months
<b>Language of Instruction</b>	English
<b>Starts in</b>	September
<b>Requirements</b>	Eligible candidates must have a bachelor's degree in Science, Technology or Engineering (Physics, Chemistry, Materials Science) or its equivalent, as well as an English language certificate.
<b>Tuition fees</b>	<p>EU students 2022: €1,000/year</p> <p>Non-EU students 2022: €8,000/year</p> <p>Check amis-master.eitrawmaterials.eu for up-to-date information.</p>
<b>Application Period</b>	1st round: 20 October 2022 – 5 March 2023
<b>Scholarships</b>	For students beginning in September 2022, EIT Label scholarships from EIT RawMaterials of €13,500 per eligible student are available. For information on how EIT Label scholarships will be awarded and who is eligible, please contact the coordinating university directly: <a href="mailto:contact@amis-master.eu">contact@amis-master.eu</a>

“I would call the AMIS programme a launchpad for understanding the full raw materials value chain and developing a mindset for innovation and entrepreneurship. The programme helped me improve my soft skills such as communication, teamwork, and flexibility, as well as nurturing a network and cultural awareness. AMIS helped me to found a start-up company in Finland, and I attended the EIT Jumpstarter 2019 winning second prize.”

# Programme Structure

AMIS is a two-year programme:

**YEAR 1** takes place at Grenoble INP, Aalto University or TU Darmstadt. Once students have chosen their entry university, AMIS provides a general curriculum in Materials Sciences, including mandatory courses in Advanced Functional Materials and Innovation, Business and Entrepreneurship.

**YEAR 2** is the specialisation year and takes place at one of the six consortium partner universities. Year 2 includes mandatory courses in Advanced Functional Materials with a specialisation in material interfaces, nanomaterials, cera-

mics or hybrids, as well as the master thesis, a research and development experience in material science jointly supervised by home university professors and host non-academic partners. Student mobility is an integrated part of the programme, involving study at two of the five consortium partner universities, depending on your chosen speciality. Year 1 and Year 2 must be taken at universities in different countries.

## MOBILITY AMIS YEAR 1 (60 ECTS)

### TRACK 1

Grenoble INP

### TRACK 2

Aalto University

### TRACK 3

TU Darmstadt

#### Topics:

- Advanced functional materials
- Innovation, business and entrepreneurship
- Project work on business models and commercialisation of technologies
- Non-academic internship

SUMMER SCHOOL: DEVELOPING SOLUTIONS TO INDUSTRIAL CHALLENGES

## MOBILITY AMIS YEAR 2 (60 ECTS)

### TRACK 1

TU Darmstadt  
Aalto University  
University of Liège  
Riga Technical University

### TRACK 2

TU Darmstadt  
University of Liège  
University of Bordeaux  
Grenoble INP  
Riga Technical University

### TRACK 3

Aalto University  
University of Liège  
University of Bordeaux  
Grenoble INP  
Riga Technical University

#### Topics:

- Advanced functional materials with specialisation
- Practical work on industrial challenges using innovation and entrepreneurship
- Specialised approach to business modelling
- Thesis carried out with university and AMIS partners
- Non-academic internship

**Darmstadt**  
Functional ceramics

**Aalto**

**Liège**  
Nanomaterials and modelling

**Bordeaux**  
Advanced hybrid materials

**Grenoble**  
Materials and interfaces

**Riga**  
Materials Science and Nanotechnology

# Master in Advanced Materials for Innovation and Sustainability

Awarded the EIT Label in 2016

## PROFESSIONAL PROFILES AFTER GRADUATION

AMIS alumni skills and knowledge will be highly appreciated by industries in the Materials Science domain or by laboratories, especially in the following sectors: microelectronics, optics, bio-technologies, energy, communication and environment. As a resource engineer, potential career paths include:

**Academic career/research:** at universities and research institutions, whether teaching students or in managerial positions. Scientists with high commercialisation awareness, knowledge and competence who can effectively communicate the commercial value of their scientific research.

**Resource industry:** SMEs in chemistry, exploration, green energy, machinery and plant construction, the metal working industry, ceramics, environmental economy (R&D, product development, management, production, marketing and sales). Expert or manager whose actions and decisions

influence the innovation output, value creation and performance of the company.

**Freelancer and entrepreneur:** creating one's own business or becoming a consultant.

**Wider society:** science journalism, consulting, project development and management, advisor to policy makers, administration, specialist agencies, media, etc.

## ARE YOU A STUDENT WHO IS:

- Interested in sparking innovation in the raw materials sector?
- Keen to become entrepreneurial and start your own company?
- Motivated to find real solutions to environmental and societal challenges?
- Interested in hands-on learning in industry and research companies?

VISIT [AMIS-MASTER.EITRAWMATERIALS.EU](http://AMIS-MASTER.EITRAWMATERIALS.EU)  
TO FIND OUT MORE AND APPLY

# Master in Resources Engineering

(Innovative Education in Geometallurgy and Circular Economy)  
Awarded the EIT Label in 2016

## THE CHALLENGE

The EMerald master's programme was created to answer the urgent need expressed by the European Union to create a resource-efficient Europe. As the EU recognised the importance of mineral and metal resources in our modern economy, it also realised that the raw materials industries were facing a critical skills shortage.

The EMerald master's programme aims to train a new generation of engineers with an entrepreneurial mind-set and a global vision of the value chain, putting the extraction of mineral and metal resources on a circle that continues by collecting end-of-life products and recovering valuable materials out of urban mines (circular economy). Therefore, the master's course focuses on two aspects:

- Bridging the gap between geological exploration and mineral processing by offering innovative education in geometallurgy
- Helping to close the loop in a resource-efficient way by forming professionals who know the processing challenges and the need to meet targets in terms of recyclability

<b>Double Diplom</b>	The consortium will deliver a triple diploma (one from each university where the student attended lectures) and a Diploma Supplement from the coordinating university: <ul style="list-style-type: none"> <li>– Ingénieur Civil des Mines et Géologue delivered by University of Liège (ULiège)</li> <li>– Master Sciences de la Terre et des Planètes Environnement delivered by University of Lorraine (UL)</li> <li>– Master of Science – Major: Geosciences delivered by Luleå University of Technology (LTU)</li> <li>– Master in Mechanical and Process Engineering delivered by Technische Universität Bergakademie Freiberg (TUBAF)</li> <li>– EIT Label Certificate</li> </ul>
<b>Credits</b>	120 ECTS, 24 months
<b>Language of Instruction</b>	English
<b>Starts in</b>	September
<b>Requirement</b>	Eligible candidates must have a bachelor's degree in Engineering with basic knowledge in Geology or a bachelor's degree in Minerals Engineering, Mining Engineering, Chemical Engineering, Geological Engineering, Metallurgical Engineering or a master's degree in Geology. At least 22.5 ECTS in Mathematics at university level are required. Candidates must also demonstrate proficiency in the English language.
<b>Tuition fees</b>	EU students 2023: €4,500/year Non-EU students 2023: €9,000/year For up-to-date fee information, visit <a href="http://www.em-georesources.eu">www.em-georesources.eu</a>
<b>Application Period</b>	Visit <a href="http://www.em-georesources.eu">www.em-georesources.eu</a> for details
<b>Scholarships</b>	For students beginning in September 2023, EIT Label scholarships from EIT RawMaterials of €13,500 per eligible student are available. Fee reductions may be available for students on EIT Label scholarships. For information on how EIT Label scholarships will be awarded and who is eligible, please contact the coordinating university directly: <a href="mailto:emerald@uliege.be">emerald@uliege.be</a>

# Master in Resources Engineering

(Innovative Education in Geometallurgy and Circular Economy)  
Awarded the EIT Label in 2016

## PROFESSIONAL PROFILES AFTER GRADUATION

The knowledge and skills EMerald graduates gain are highly valued in the industry and beyond. Not only are EMerald graduates qualified to work in the fields of mining, building materials (cement, aggregates), non-ferrous metals production and circular economy of metals and mineral chemistry; possible career paths also include working for:

- Geological surveys
- Junior exploration companies
- Investment banks (resources sector)
- Venture capital (resources sector)
- EU Commission (raw materials and industry)
- National/regional governments (mining laws, implementing circular economy, mineral industry)
- EMerald also prepares you for further study (PhD) in mineral processing, geometallurgy, resources/reserves estimation, process development, mineral industry, etc.

### ARE YOU A STUDENT WHO IS:

- Interested in sparking innovation in the raw materials sector?
- Keen to become entrepreneurial and start your own company?
- Interested in bridging the gap between geology and metallurgy?
- Curious to acquire understanding of the whole raw materials value chain?
- Motivated to expand your professional network by studying with at least three European universities?

VISIT [EM-GEORESOURCES.EU](http://EM-GEORESOURCES.EU)  
TO FIND OUT MORE AND APPLY

# Programme Structure

EMerald is organised into four semesters and accounts for 120 ECTS or 30 ECTS per semester.

The first year of the programme aims to harmonise students' knowledge and help them find the right balance between resource characterisation and modelling, and processing and management techniques (multidisciplinarity). The thematic courses offered by the two universities (ULiège and UL) are complemented by a strong programme to develop transversal skills. Industry experts and invited scholars bring in key contributions on corporate social responsibility, economics, life cycle analysis and other essential aspects of modern sustainable engineering operations. All courses offer a blend of theoretical lectures and practical work in the labs. Students often work in groups on a real

case study, discovering possible processing routes for complex ores and waste materials. The third semester offers students the option to specialise more upstream at LTU (primary resources) or downstream at TUBAF (secondary resources). The final semester can be spent in any of the aforementioned institutions depending on the thesis specialisation. Regardless of the location, the master thesis will be completed in close collaboration with an industrial partner or a research centre that will also host the students for an internship. The full catalogue of courses is available on the EMerald website: [www.em-georesources.eu](http://www.em-georesources.eu)

“Being an EMerald student, studying in renowned universities, and having contact with people from all around the world allowed me to grow professionally and mainly, personally. The programme not only opened my mind to new concepts but taught me how to think about our resources with a new approach. It has also offered me the possibility to work nowadays in an environment where I feel useful in building a sustainable world for the next generations.”

— **BARBARA DORNELAS, BRAZIL (EMERALD)**

## YEAR 1

HARMONISATION, TEAM BUILDING, EXPERIENCE EUROPE

### SEMESTER 1 (30 ECTS)

University of Liège

#### Select courses for 30 ECTS between:

- Process Mineralogy (5 ECTS)
- Solid Waste and By-Products Processing (5 ECTS)
- Geostatistics (5 ECTS)
- Seminars on Economical and Societal Issues
- Mining and Recycling (5 ECTS)
- Mineral Resources (5 ECTS)
- Mineral Processing (5 ECTS)
- Numerical Analysis (5 ECTS)
- Exploitation of Mineral Deposits (5 ECTS)

### SEMESTER 2 (30 ECTS)

University of Lorraine

- Advanced Characterisation of Mineral/Water interface (5 ECTS)
- Case Study of Ore Processing (5 ECTS)
- Resources Modelling and Evaluation (5 ECTS)
- Management of Resources (5 ECTS)
- Exploitation of Mineral Raw Materials and Environmental Impact of Mining (2 ECTS)
- Advanced Mineral Processing (8 ECTS)

SUMMER BUSINESS SCHOOL

## YEAR 2

CIRCULAR ECONOMY, SPECIALISATION IN PRIMARY OR SECONDARY RESOURCES

### SEMESTER 3 (30 ECTS)

Luleå University of Technology  
Primary Resources

- Mining Geology (7.5 ECTS)
- Mineral Processing II (7.5 ECTS)
- Geometallurgy (7.5 ECTS)

#### Elective courses:

- Senior Design Project in Mineral Processing (7.5 ECTS)
- Simulation of Mineral Processing (7.5 ECTS)

### SEMESTER 3 (30 ECTS)

TU Bergakademie Freiberg  
Secondary Resources

- Project- Process Design Mineral Processing/ Recycling (8 ECTS)
- Practice of Secondary Raw Materials (4 ECTS)
- Thermodynamics and Heat Transfer (4 ECTS)
- Selective Separation of Strategic Elements (5 ECTS)
- Resource Management (6 ECTS)

#### Elective courses:

- Mineral Liberation Analysis of Mineral Resources (3 ECTS)
- Simulation of Sustainable Metallurgical Process (6 ECTS)

### SEMESTER 4 (30 ECTS)

University of Liège

### SEMESTER 4 (30 ECTS)

University of Lorraine

### SEMESTER 4 (30 ECTS)

Luleå University of Technology

### SEMESTER 4 (30 ECTS)

TU Bergakademie Freiberg

Master thesis

**MEITIM<sup>®</sup>**

# Master in Entrepreneurship, Innovation and Technology Integration in Mining

Awarded the EIT Label in 2022

The dual transition to a digital and carbon-free economy has generated an accelerated demand for new professional profiles in engineering. In the mining value chain, from the prospection and exploration stages, extraction, mineral processing, metallurgy and up to delivering products to customers, innovation and technology integration has become the backbone of the industry's development. Digitalisation will reduce costs, improve efficiency, productivity, environmental standards and transform mining processes across the industry. Government and shareholders are putting increasing pressure on the mining sector to meet

decarbonisation targets and improve safety at mining sites. Breakthrough innovations rarely happen by chance or luck, but rather are built on a combination of constant work, skills, creativity, years of experience, and structured collaboration. The real challenge, however, is to build continuous improvement into a company's workstream, and this needs skilled professionals with an advanced technical knowledge, an understanding of the full raw materials value chain and the skills required to transform knowledge into solutions and business.

<b>Double Diploma</b>	Graduates of the MEITIM programme will be awarded a double Master of Science degree, depending upon their chosen pathway. Graduates will also be awarded the EIT Label Certificate.
<b>Credits</b>	120 ECTS, 24 months
<b>Language of Instruction</b>	English
<b>Starts in</b>	September
<b>Requirements</b>	The programme is aimed at candidates who have a bachelor's degree in Engineering in raw materials sector disciplines (minimum 3 years of study or 180 ECTS credits), or a bachelor's degree in Chemistry, Physical-Chemistry, Materials (or Matter) Sciences. Candidates must also demonstrate advanced knowledge in Programming and English language proficiency. Please check the MEITIM website <a href="http://meitim.eu">meitim.eu</a> for full details.
<b>Tuition fees</b>	Tuition fees may vary depending on the study track chosen. Check <a href="http://meitim.eu">meitim.eu</a> or for up-to-date information.
<b>Application Period</b>	Please consult <a href="http://meitim.eu">meitim.eu</a> for information on application deadlines, requirements, and documentation required.
<b>Scholarships</b>	For students beginning in September 2023, EIT Label scholarships from EIT RawMaterials of €13,500 per eligible student are available. For information on how EIT Label scholarships will be awarded and who is eligible, please contact the coordinating university directly: <a href="mailto:meitim@eitrawmaterials.eu">meitim@eitrawmaterials.eu</a> . Additional scholarships and grants may be available – visit <a href="http://meitim.eu">meitim.eu</a> for details.

The MEITIM programme has been created to train a new generation of engineers that is needed to create and develop new opportunities, all born from innovation and an intelligent integration of technological developments, contributing to a significant source of competitive advantage and value creation with new business opportunities, all along the mining value chain.

# Programme Structure

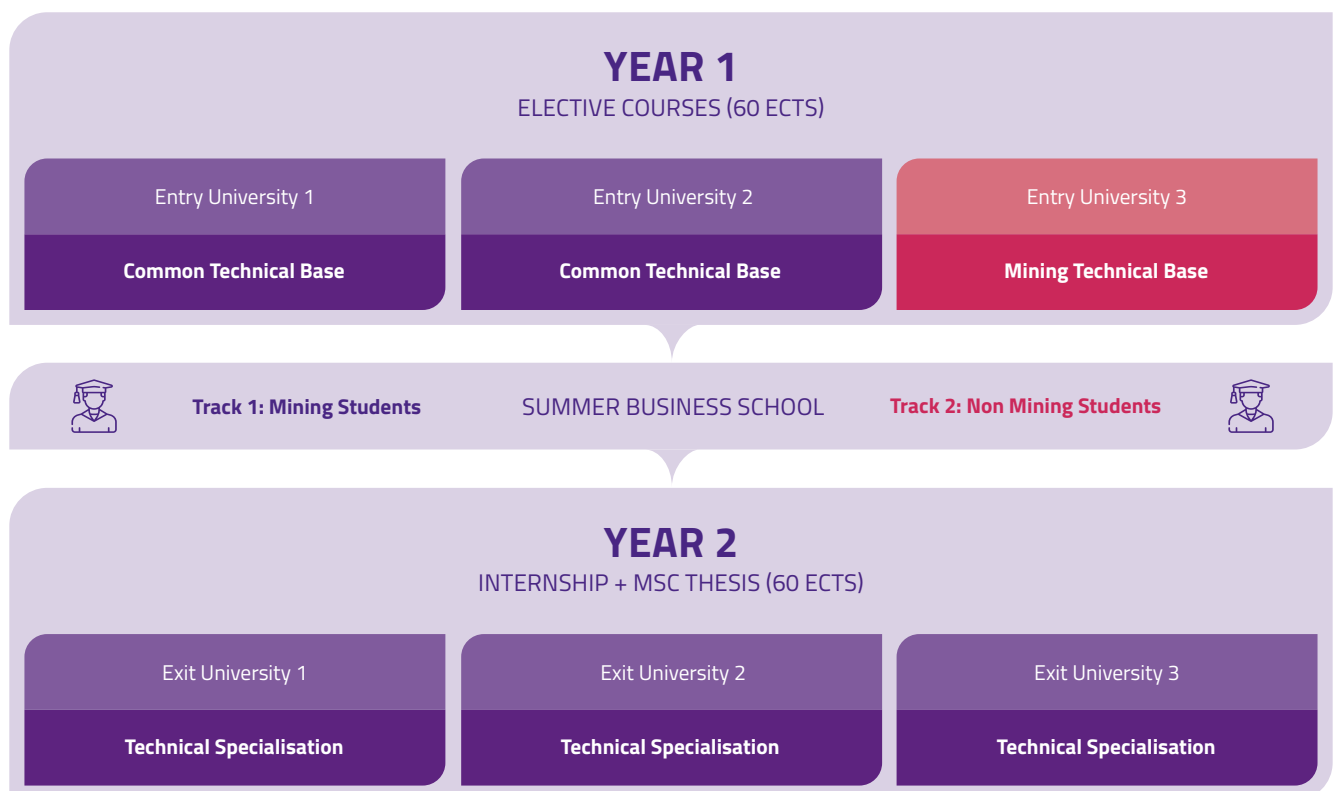

MEITIM is a two-year programme organised into four semesters and accounts for 120 ECTS or 30 ECTS per semester.

Students study one year at an 'entry' university and one year at an 'exit' university, both of which are partners of EIT RawMaterials and the MEITIM Project. The first year is focused on basic courses and electives that lay the foundation for the chosen technical programme, together with an intense and integrated learning and training in innovation and entrepreneurship (I&E):

- Students are introduced to business and management from the first year.
- During the second semester, a design project is combined with business development exercises to demonstrate how technology can be transformed into a successful business.
- Students are taught how to prepare and present a convincing business plan, and have the option to take elective courses.
- Between the first year and the second year, the summer school programme addresses business opportunities within a socially relevant theme.

The second year offers a specialisation and a graduation project. The graduation project includes an internship at a company or a research institute and culminates in the development of a Master thesis which features a strong innovation and entrepreneurship dimension.

Graduates receive degrees from the two universities and the EIT Label certificate awarded by the European Institute of Innovation and Technology (2 diplomas + 1 certificate in total).

# Master in Mineral Exploration

Awarded the EIT Label in 2022

## PROFESSIONAL PROFILES AFTER GRADUATION

Graduates of the MEITIM programme will have the training and preparation to participate actively in the transformation that the mining sector is undergoing, including through a sound knowledge in the latest technologies through practical training, and the ability to integrate innovation and new technologies into feasible business solutions for the raw materials value chain. The MEITIM programme aims to give students the ability to understand technical, business, social and economic aspects and, with this, to stimulate their technological innovation and technologies integration capacities with the vision of creating new opportunities and added value.

Graduates of the MEITIM programme will be fully qualified to expand the relationships of professionals in this dynamic and innovative activity sector and to work for:

- Mining and metallurgical companies
- EU bodies (raw materials and industry)
- Investment banks (raw materials sector)
- Venture capital (raw materials sector)
- National/regional government agencies
- Engineering and consulting firms
- Freelancer and entrepreneur
- Knowledge institutions, research institutes and think-tanks

## ARE YOU A STUDENT WHO IS:

- Interested in the mineral primary resources value chain?
- Passionate about innovation and technology?
- Motivated to develop new solutions and open new pathways?
- Driven to become an entrepreneur or intrapreneur who makes innovation happen?
- Keen to be a participant in the new industrial revolution and transition?

# RaMES

## RaMES: Master in Raw Materials Exploration and Sustainability

Awarded the EIT Label in 2020

### THE CHALLENGE

Effective exploration and discovery of new primary Raw Materials are of great importance for securing future supplies in the global economy. Within this context, one of the global challenges is the creation of the next generation of resource specialists within the raw materials world. These specialists must have extensive knowledge of primary raw materials, broad competences and skills in identifying and characterising raw materials in the anthroposphere (e.g. tailings, landfills, or in-use stocks), and sensitivity to pressing managerial and business challenges that the effective exploration of raw materials poses. Understanding the

large-scale, socio-economic metabolism underlying the complex raw materials value chain is of vital importance for geologists and all other professionals working with raw materials. Consequently, there is an increasing need to broaden research and educational perspectives to secure future supplies.

Following this approach, RaMES is an MSc degree that blends a Resource Geology curriculum with subjects devoted to exploration and the deployment of raw materials as a sustainable process.

<b>Diploma</b>	The master's programme delivers a Diploma Supplement from The University of Bologna. The programme will award graduates an EIT Label Certificate in addition to the Master's Degree.
<b>Credits</b>	120 ECTS, 24 months
<b>Language of Instruction</b>	English
<b>Starts in</b>	October 2023
<b>Requirements</b>	Eligible candidates must have a bachelor degree in Geology, Earth sciences, Mining engineering, Environmental engineering or similar. Candidates must also demonstrate proficiency in the English language.
<b>Tuition fees</b>	Tuition fees are calculated based on the 2020 ISEE value which is a family income parameter largely used in Italy. Foreign students can calculate an equivalent ISEE value by using the UNIBO website functions. If you do not present your ISEE value you will have to pay the full tuition fees, that are 4.080,00€
<b>Application Period</b>	Check <a href="http://www.master-rames.eu">www.master-rames.eu</a>
<b>Scholarships</b>	All RaMES students will have the opportunity to apply for an Erasmus+ scholarship provided by the University of Bologna, which will provide partial funding for the expenses related with the international mobility. The grant amounts to €700/month as a contribution for living costs plus a contribution for travel expenses, to be paid to students during their period studying at NTNU in Norway, and for a maximum of six months. Other grants may be available; visit <a href="http://master-rames.eu">master-rames.eu</a> for details.

“RaMES was an obvious choice for me because I was looking for an MSc in mineral exploration with an international outlook. The comprehensive view of the complex raw materials value chain that RaMES gives also opens more possibilities for my future career. I think RaMES can play a fundamental role in solving the raw materials supply security issues in Europe by educating high-level, multidisciplinary professionals in the field.”

— **NIKITA MALAFEEVSKIY, ITALY (RAMES)**

#### PARTICIPATING UNIVERSITIES

The University of Bologna

# RaMES: Master in Raw Materials Exploration and Sustainability

Awarded the EIT Label in 2020

## PROFESSIONAL PROFILES AFTER GRADUATION

Given the worldwide demand for professionals in mining and minerals engineering and management, graduates of RaMES have promising career opportunities. RaMES graduates will be qualified to work for:

- Mining companies and companies engaged in mineral processing technology
- Companies working on ore deposits and integrated production
- Market leaders in efficient dredging and mining
- Aggregates companies
- Government agencies
- Engineering and consulting firms
- Knowledge institutions, research institutes and think-tanks

Alternatively, the entrepreneurial and innovative skills which you have developed during the programme will help you to set up your own business.

## ARE YOU A STUDENT WHO IS:

- Interested in mineral deposits and their bearings on the raw material value chain?
- Interested in sparking innovation in the raw materials sector?
- Motivated to spend time working with companies and research organisations in the raw materials and sustainability sectors?
- Driven to become an entrepreneur or intrapreneur who makes innovation happen?

# Programme Structure

The programme consists of four semesters. During the first and second semester the University of Bologna will deliver eight courses (60 ECTS), including one elective (6 ECTS). During the third semester, the programme consists of four courses that are delivered by the Norwegian University of Science and Technology (24 ECTS), as well as a two-week field course (6 ECTS). Semester four may include an In-

ternship for the preparation of the Final Thesis and the Thesis itself, carried out with an industrial partner (total: 30 ECTS). The Curricular Internship may be carried out in tandem with the Final Thesis with an industrial partner, but in that case it will be of 15 ECTS and the Thesis will also be 15 ECTS.

University of Bologna NTNU

## KICK-OFF MEETING

### SEMESTER 1 - AUTUMN

Geochemistry of RMs  
8 ECTS

Mineral Science  
9 ECTS

Applied Petrology  
8 ECTS

Environmental Impact, LCA  
and Urban Mining  
8 ECTS

### SEMESTER 2 - SPRING

Mineral Deposits in the field  
8 ECTS

Primary Mineral Deposits  
9 ECTS

Geophysical Exploration  
6 ECTS

Political Economy of Industry  
and Development  
6 ECTS

### SEMESTER 3 - AUTUMN

Solid Waste Technology  
and Resource Recovery

Geometallurgy

Mineral Production,  
Basic course

Elective Course

### SEMESTER 4

ELECTIVE COURSE - 6 ECTS

CURRICULAR INTERNSHIP - 6 ECTS

INTERNSHIP FOR THESIS PREPARATION (15 ECTS)

FINAL EXAMINATION (15 ECTS)

Raw  
Materials  
Value  
Chain

RaVeN

# RaVeN Master in Mining Engineering

Awarded the EIT Label in 2022

Today's Europe needs a skilled workforce for the raw materials industry, which forms the basis for the development of innovative technologies and industries of the future. The large imbalance between raw material acquisition and consumption that exists in Europe requires a greater commitment to securing supply chains. Such a strategy demands the acquisition of a skilled, entrepreneurial workforce with an awareness of sustainable activities between technology, economics, society and the environment. The RaVeN EIT-Labelled master's programme in Mining Engineering responds to this challenge by offering an innovative education programme which offers a comprehensive

approach to resources with an emphasis on a holistic value chain and on closing the gap between the supply of, and demand for, raw materials. The objective will be pursued along an active learning path involving students and looking for unconventional solutions that can get us closer to a more self-contained (natural resource re-circulating) and, therefore, more sustainable economy. The three cooperating university partners, representing a broad geographical and cultural spectrum, collaborating with the two sides of the Knowledge Triangle, contribute a combination of expertise and highly entrepreneurial mindsets to the programme.

<b>Double Diploma</b>	Graduates of the RaVeN programme will be awarded diplomas from AGH University of Science and Technology and TU Bergakademie Freiberg. Students will obtain the degree: 1) at AGH UST - magister inżynier; 2) at TUBAF - Master of Science. Graduates will also be awarded the EIT Label Certificate.
<b>Credits</b>	120 ECTS, 24 months
<b>Language of Instruction</b>	English
<b>Starts in</b>	October
<b>Requirements</b>	Eligible candidates must hold a Bachelor's degree in Geology, Mining Engineering, Mineral Processing, Environmental Engineering, Mechanical Engineering, Metallurgy or similar, as well as proof of English language proficiency. Students holding a bachelor's degree from outside of the core field of engineering can be selected by the decision of the Program Council. The admission criteria are available at <a href="http://ravenmaster.eu">ravenmaster.eu</a>
<b>Tuition fees</b>	AGH - No tuition fees apply. A registration fee of 100 PLN will apply to all students. TUBAF – a semester fee of 300€/semester applies for applicants who already hold a master's degree
<b>Application Period</b>	June-September 2023 Detailed information on the recruitment process will be posted at <a href="http://ravenmaster.eu">ravenmaster.eu</a> in March 2023.
<b>Scholarships</b>	AVSA scholarships of €13,500 from EIT RawMaterials are available. Information on how EIT Label scholarships are awarded and how to receive them will be made available at <a href="http://ravenproject.eu">ravenproject.eu</a> . For those students who will not be funded by AVSA, national ministerial scholarships can be provided. Additionally, the best students can be awarded academic scholarships for the highest academic achievements. Please refer to the <a href="http://ravenmaster.eu">ravenmaster.eu</a> website for information on available scholarships.

The RaVeN programme bridges the gap in the European raw materials sector's workforce, in the training of skilled, entrepreneurial professionals with an awareness of sustainable activities between technology, economics, society and the environment. I firmly believe that this programme will meet the growing demands of future employers by producing graduates who are entrepreneurial, creative and think out-of-the-box.

# Programme Structure

The RaVeN is a new two-year Mining Engineering MSc. degree scheme.

## YEAR 1

### SEMESTER 1 (31 ECTS) AGH UST

- Business training and general trends in the raw materials value chain
- Sustainable exploration of deposits and modern geological technologies for their identification
- The challenges of mining activities in the world
- New trends in mining technologies and mineral processing
- Problems in post mining areas - water management, reclamation, revitalisation
- Energy efficiency - sustainable sources of energy under renewables requirements
- Modern and innovative machines and mining methods used in raw materials excavation
- Economics and Managerial Finance in raw materials
- Statistical tools and data exploration for digitalisation
- Social effectiveness in raw materials management
- Social aspects of sustainable development
- Environmental engineering
- Structures and organisational aspects of lean production
- Business models for sustainable markets
- Sustainable effectiveness of processes in circular economy

### SEMESTER 2 (29 ECTS) AGH UST

- Innovative processes for circular economy in the non-ferrous metals industry
- Modern technologies in Mineral Processing
- Metallurgical industry development
- Materials science and engineering innovation
- Innovation management and entrepreneurship
- Summer school
- Lean production in advanced material development
- The quality management of production processes  
Eco designing products for circular economy
- Reporting on the SDGs
- English – B2 level

## YEAR 2

### SEMESTER 3 (33 ECTS) TUBAF

- Hydrogeology for GW-Management
- Radioactivity
- Reclamation
- Environmental geotechnics
- Management and finance of mining operations along the life cycle
- Licensing, stakeholder involvement and expectations management
- Project and contract management

### SEMESTER 2 (29 ECTS) AGH UST

- Industrial practices
- Master thesis
- Seminars
- Data reporting spreadsheets with SQL queries
- Business management and economic efficiency

# RaVeN Master in Mining Engineering

Awarded the EIT Label in 2022

## STUDY PROGRAMME

The strength of the RaVeN programme is its innovative approach to teaching through an active learning path by integrating academia, industry and research along the raw materials value chain through the involvement of non-academic experts, mobility exchanges, industry and start-ups. Visit [ravenproject.eu](http://ravenproject.eu) to explore the full RaVeN study programme.

## PROFESSIONAL PROFILES AFTER GRADUATION

The RaVeN master's degree programme will prepare students with the hard and soft skills needed to understand and solve complex problems related to the entire raw materials value chain. The training and knowledge offered by the programme will offer an advantage for future professionals in the sector, as it focuses on key steps of the value chain that are lacking in the current education portfolio in Europe. The programme is designed to prepare students with up-to-date specialised practical knowledge on the sustainable exploitation of raw materials throughout the value chain: sourcing, processing, use, recycling, and back to sourcing. In addition, the RaVeN MSc fosters creativity, innovation and entrepreneurship, preparing graduates to implement innovative solutions at their workplaces, or to start and run their businesses successfully. Through the programme, students will become technical experts in the field of raw materials, being aware of sustainability, and gaining a holistic view of the value chain and processes. Graduates' skills and knowledge will be highly valued in the mining and processing, metallurgy, energy, automotive and logistics sectors.

## RAW MATERIALS VALUE CHAIN SOLUTIONS WITH RAVEN

The curriculum is designed to equip participants with expertise in sustainable extraction, processing and end-use of raw materials. The comprehensive approach of combining academic and expert knowledge will translate into awareness of, and concern for, the raw materials value chain sector in Europe. The process of knowledge acquisition will be carried out with close co-operation with a broad spectrum of stakeholders - including SMEs and large corporations. In addition, the study programme will lead participants towards "circular thinking", bridging of the raw materials gap with zero-waste policies that will be discussed during academic lectures as well as meetings with the industry.

## ARE YOU A STUDENT WHO IS:

- Wanting to contribute to securing raw materials supply?
- Keen to gain expertise over the entire raw materials value chain?
- Motivated to acquire entrepreneurship skills and start your own business?
- Willing to support and contribute to the design of products and services for the circular economy?

VISIT [RAVENMASTER.EU](http://RAVENMASTER.EU) TO FIND OUT MORE AND APPLY

# International Master of Science in Sustainable and Innovative Natural Resource Management

Awarded the EIT Label in 2017

## THE CHALLENGE

Sustainability is more than just a buzzword. Raw materials are one of the fastest depleting resources on Earth. A steady and sustainable supply of many of these materials is vital for a decarbonising society, renewable energy infrastructure, electric mobility and also consumer products and electronics. The outdated make-take-use-dispose model is no longer valid in a world of finite resources. In order to deal with this challenge, three leading European universi-

ties cooperated to develop a new Erasmus and master's programme — the International Master of Science in Sustainable and Innovative Natural Resource Management (SINReM). SINReM was created to educate a new generation of professionals who can engineer technology to reinvent materials science and gain competence, expertise and confidence in developing solutions in the sustainable use of materials.

With the support of the  
Erasmus+ Programme  
of the European Union

<b>Joint diploma</b>	Joint diploma of International Master of Science in Sustainable and Innovative Natural Resource Management from Ghent University, TU Freiberg and Uppsala University. – EIT Label Certificate
<b>Credits</b>	120 ECTS, 24 months
<b>Language of Instruction</b>	English
<b>Starts in</b>	September
<b>Requirements</b>	A bachelor's degree (minimum 180 ECTS) in bioscience engineering, chemical engineering, chemistry, environmental sciences and engineering, geology, geophysics, mining engineering, mineralogy, materials sciences, metallurgy or process engineering, or another degree that shows affinity with any aspect of the (minerals and metal) raw materials value chain. This should include the equivalent of at least 10 ECTS in chemistry and 15 ECTS in physics/mathematics. Degrees in natural resources management (forestry, wildlife, bio-conservation, ect.) are not suited for the SINReM programme. Visit <a href="http://www.sinrem.eu">www.sinrem.eu</a> for more detailed academic and language requirements.
<b>Tuition fees</b>	European (EEA) 2023: €6,000/year All others 2023: €12,000/year Visit <a href="http://www.sinrem.eu">www.sinrem.eu</a> for up-to-date fee information.
<b>Application Period</b>	All nationalities for Erasmus Mundus scholarship: 28 February 2023. Non-EEA and non-Swiss for AVSA scholarship or as self-funding student: 28 February 2023. EEA and Swiss for AVSA scholarship or as self-funding student: 31 May 2023. Visit <a href="http://www.sinrem.eu">www.sinrem.eu</a> for up-to-date deadline information.
<b>Scholarships</b>	For students enrolling in September 2023, AVSA scholarships of €13,500 from EIT RawMaterials are available. European EIT RawMaterials scholarship holders receive a partial tuition fee waiver down to €2,000 per year. Additionally, a number of Erasmus Mundus full scholarships of up to €49,000 are available, covering full tuition fees and living expenses. Visit <a href="http://www.sinrem.eu">www.sinrem.eu</a> for up-to-date scholarship information.

“The SINReM program has allowed me to study at 3 different world-class universities. It has been a great way to combine my studies with travelling. Although we were held back by the pandemic in many ways, I can't think of a better way to have spent the last 2 years (2020-2022)!”

# Programme Structure

## YEAR 1

### SEMESTER 1 Ghent University

- Workshop Problems and innovations in the process chain of mineral resources at TU Freiberg (4 ECTS)
- Introduction to the circular economy, economics and management of natural resources (4 ECTS)
- Clean technology (5 ECTS)
- Sustainable development and multicriteria decision-making (3 ECTS)
- Rational use of materials (5 ECTS)
- Resource recovery and recycling technologies (5 ECTS)

### SEMESTER 2 Uppsala University

- Mineral exploration (10 ECTS)
- Innovation management and entrepreneurship (10 ECTS)
- Elective course (5 ECTS)
- Summer course on Resources chemistry at TU Freiberg (9 ECTS)

HOLISTIC VIEW OF THE VALUE AND PROCESS CHAIN

## YEAR 2

ELECTIVE MAJOR

### Ghent University

- Circular societies (15 ECTS) OR
- Resource recovery and sustainable materials (15 ECTS)
- Financial and sustainability reporting, financial planning and business valuation (5 ECTS)
- Training in industry (internship) (10 ECTS)
- Master thesis (30 ECTS)

### Uppsala University

- Georesource exploration (15 ECTS) OR
- Sustainable entrepreneurship (15 ECTS)
- Financial and sustainability reporting, financial planning and business valuation (5 ECTS)
- Training in industry (internship) (10 ECTS)
- Master thesis (30 ECTS)

### TU Freiberg

- Sustainable processes (15 ECTS)
- Financial and sustainability reporting, financial planning and business valuation (5 ECTS)
- Training in industry (internship) (10 ECTS)
- Master thesis (30 ECTS)

DEEP UNDERSTANDING OF ONE SUBJECT AREA

# International Master of Science in Sustainable and Innovative Natural Resource Management

Awarded the EIT Label in 2017

## PROFESSIONAL PROFILES AFTER GRADUATION

**Entrepreneur:** SINReM prepares you to start your own business. You will interact with company founders from the raw materials sector, gain the necessary knowledge and skills for innovation management and IPR, learn to develop and analyse business models and plan how to implement research results into application. Industrial partners and the research transfer/ business development departments of the three partner universities are also there to support you.

**Work in the Industry:** Create a spin-off from an existing company or become a resource engineer in research departments or technological departments of small, medium and large companies worldwide.

## ARE YOU A STUDENT WHO IS:

- Interested in exploring how to use engineer technologies to improve the use of finite raw materials?
- Keen to learn how innovation and entrepreneurship competence and skills can position you to contribute both to current industries and create your own start-up?
- Motivated to work closely with industry and research on developing science-based solutions to pressing challenges?

# Master in Sustainable Materials

Awarded the EIT Label in 2016

## **Sustainable Material Solutions with SUMA**

The SUMA master's programme aims to train tomorrow's resource engineers to work collaboratively in a global world, gathering together some of the best educational programmes in the field of sustainable materials engineering in Europe. The goal is to ensure young scientists obtain a solid background in chemistry and physics, with competences for designing and tailoring new material systems for specific

functions and with a specific view to the sustainability of processes and technologies in the field of material development. SUMA puts a particularly strong focus on innovation, entrepreneurship and leadership and takes a holistic approach to the materials paradigm by exploring circular (eco) design, materials substitution, life cycle engineering and circular economy design, materials processing and recycling, manufacturing and innovation.

<b>Double Diploma</b>	<p><b>Dual Master of Science degree awarded from two of the following universities:</b></p> <ul style="list-style-type: none"> <li>– Leuven, Belgium</li> <li>– Leoben, Austria</li> <li>– Trento, Italy</li> <li>– Grenoble, France</li> <li>– Milan, Italy</li> </ul> <p>EIT Label Certificate</p>
<b>Credits</b>	120 ECTS, 24 months
<b>Language of Instruction</b>	English
<b>Starts in</b>	September
<b>Requirements</b>	Students should have: Bachelor of Science or Bachelor of Engineering (or equivalent), as well as proof of English language proficiency. Candidates must meet the admission criteria of the master's degree programmes of both partner institutions of their chosen track. Please refer to the individual entry university websites for information on admission requirements.

# Master in Sustainable Materials

Awarded the EIT Label in 2016

## PROFESSIONAL PROFILES AFTER GRADUATION

The SUMA master's programme aims at training scientists with a solid background in chemistry and physics, with competences for designing and tailoring new material systems for specific functions, and with a specific view to the sustainability of processes and technologies in the field of material development. The main job opportunities are in industries and research centres in Europe, working on the development and production of functional materials for advanced applications and high technology. Graduates can start a career as highly valued future leaders in positions of responsibility in managing advanced material design, production processes and material qualifying protocols in high-tech firms, material diagnostics and analysis in industries and research centres, and material development projects and scientific research projects in the field of material science and technology innovation.

## SUSTAINABLE MATERIAL SOLUTIONS WITH SUMA

The SUMA master's programme aims to train tomorrow's resource engineers in collaborative work in a global world, gathering together some of the best educational programmes in the field of sustainable materials engineering in Europe. The goal is to ensure young scientists obtain a solid background in chemistry and physics, with competences for designing and tailoring new material systems for specific functions, and with a specific view to the sustainability of processes and technologies in the field of material development. SUMA puts a particularly strong focus on innovation, entrepreneurship and leadership and takes a holistic approach to the materials paradigm by exploring circular (eco) design, materials substitution, life cycle engineering and circular economy design, materials processing and recycling, manufacturing and innovation.

A man wearing a yellow hard hat and a dark jacket is shown in profile, looking down at a blue handheld device. He is in a dark, rocky environment, possibly a tunnel or mine, with a bright light source illuminating the rock wall behind him. The device has the word 'TIMREX' on it.

# Timrex

## TIMREX Master in Mineral Exploration

Awarded the EIT Label in 2022

Built on existing strong minerals exploration MSc programmes, TIMREX is a joint master's degree in mineral exploration with add-on innovation and entrepreneurship skills. The programme has a strong emphasis on field activities and the application of innovative exploration techniques and solutions is the specialty of TIMREX among the EIT-Labelled master programmes. Intensive fieldwork is expected from the students during the summer period between the first and second years of study. Students will develop their entrepreneurship, innovative and socio-civic skills, with strong support from industrial and research partners.

<b>Double Diploma</b>	Graduates will be awarded a double or single Master of Science degree from University of Miskolc, Wrocław University of Science and Technology, the University of Zagreb and/or Luleå University of Technology (depending on the study pathway chosen by the student). Graduates will also receive the EIT Label Certificate.
<b>Credits</b>	120 ECTS, 24 months
<b>Language of Instruction</b>	English
<b>Starts in</b>	September 2023 / February 2024 depending on year one university chosen
<b>Requirements</b>	Candidates should have a Bachelor's degree with strong earth sciences background (BSc in Geology, Geophysics, Earth Sciences, Earth Sciences Engineering, Geosciences Engineering, Mining Engineering), as well as an English language certificate (advanced knowledge level of English, minimum B2 level, for details please visit timrex-master.eu
<b>Tuition fees</b>	Please consult the TIMREX website timrex-master.eu for up-to-date information
<b>Application Period</b>	First round: 15 February – 30 April Please visit timrex-master.eu for details
<b>Scholarships</b>	For students beginning in September 2023 or February 2024, EIT Label scholarships from EIT RawMaterials of €13,500 per eligible student are available. For information on how EIT Label scholarships will be awarded and who is eligible, please contact the coordinating university directly: timrex@uni-miskolc.hu

“The TIMREX summer school taught me many things starting from the geology of the region to the most innovative exploration techniques. I got a better understanding of igneous ore-forming processes, data interpretation, and visualisation methods. I am very glad that I had an opportunity to participate in this summer school, which gave me a lot of knowledge and brought me together with so many nice people.” - Irma Becelyte

— IRMA BECELYTE

#### PARTICIPATING UNIVERSITIES

##### University of Miskolc

Hungary

##### University of Zagreb - Faculty of Mining, Geology and Petroleum Engineering (RGNF)

Croatia

##### Wrocław University of Science and Technology

Poland

##### Luleå University of Technology

Sweden

#### FOR MORE INFORMATION

##### Faculty of Earth and Environmental Science and Engineering, University of Miskolc

Hungary,

H-3515 Miskolc-Egyetemváros

# Programme Structure

The TIMREX joint master programme is organised along seven mobility routes between the four academic partners. First year study is offered in parallel by the UM, UNIZG-RGNF and WUST, while the second year offers specialisations along the mobility routes.

The cohort starts in 2023 September at UM and UNIZG - RGNF and in 2024 February at WUST. Pathways involving UM, WUST and UNIZG-RGNF offer a double degree.

Visit [timrex-master.eu](http://timrex-master.eu) to explore the details of the 7 route options in the TIMREX study programme.

## TIMREX YEAR 1

(APPLIED EARTH SCIENCES AND EXPLORATION)

University of Miskolc

University of Zagreb

Wrocław University of Science  
and Technology

## MOBILITY TIMREX YEAR 2

(SPECIALISATIONS)

Luleå University of Technology  
(ore mineral exploration)

University of Miskolc  
(geophysical methods and instrumentation for exploration)

University of Zagreb  
(prospecting and exploration of non-metallic mineral resources)

Wrocław University of Science  
and Technology  
(applied skills in mining geology)

# Master in Mineral Exploration

Awarded the EIT Label in 2022

## PROFESSIONAL PROFILES AFTER GRADUATION

Earth science specialists will be able to apply innovative mineral exploration methods and techniques in the field and integrate the collected data with comprehensive analytical and laboratory results. Students interested in equipment development or programming will have the opportunity to specialise in these topics, contributing to research groups and start-ups to develop sensors, portable analytical equipment, data processing and visualising software. In addition, students with an entrepreneurial mindset will learn entrepreneurial and socio-civic skills and attitudes suitable to becoming employed by a junior company, or to become a freelance expert – mentored by the industrial and research partners of the consortium.

## INNOVATIVE FIELD-BASED MINERAL EXPLORATION SOLUTIONS WITH TIMREX

The objective of the TIMREX master programme is to develop a high-quality education programme in the field of mineral exploration with double-degree routes, structured mobility pathways, mentoring sessions, and strong field-based training. The pillars involved in the education journey comprise 1) strong field work using innovative mineral exploration technologies applied in greenfield and brownfield mineral occurrences, 2) solid theoretical background for completion and management of exploration campaigns, and 3) processing and interpretation of field and laboratory-derived data with specialised software, as well as 4) development of entrepreneurial and socio-civic competences to join or establish junior exploration companies.

### ARE YOU A STUDENT WHO IS:

- Keen to develop a career in mineral exploration?
- Motivated to learn about innovative techniques and technologies in the field?
- Interested in spending one semester at a partner university to develop a different specialisation?
- Interested in acquiring entrepreneurship skills and building self-confidence for the market?
