## **Second Cycle Degree/ Two Years Master's Degree in Science And Technologies For Environmental Sustainability**

### **ART. 1 ADMISSION REQUIREMENTS**

In order to profitably attend the Second-Cycle Degree/Two-Year Master's Degree in Science and Technologies for Environmental Sustainability, students must possess appropriate knowledge of mathematics, physics, chemistry, biology, ecology, earth sciences at university level, and in particular:

- basic knowledge of mathematics in the fields of mathematical analysis and linear algebra
- basic knowledge of physics in the fields of thermodynamics and electromagnetics
- basic knowledge of general chemistry and organic chemistry
- basic knowledge in the field of cell biology, zoology and botany
- basic knowledge of earth sciences in the fields of geology and the description of the earth's surface
- basic knowledge of ecology

Admission to the Second-Cycle Degree/Two-Year Master's Programme requires possession of a Bachelor's degree or A three-year university Diploma, or any other degree obtained abroad, recognised as suitable.

Additionally, candidates must meet the curricular requirements and pass the assessment of personal knowledge and skills.

- **Curricular requirements:**

- pursuant to Italian Min. Decree 270/04: L-32 Environmental Sciences;
- pursuant to Italian Min. Decree 509/99: 27-Environmental Sciences;
- Previous degree programme system: Environmental Sciences; Natural Sciences;  
or
- have a first-cycle degree from a different class to those indicated and have obtained the credits indicated in the degree programme teaching regulations.

Admission to the master's degree programme requires candidates to pass an assessment of personal competencies that will be held according to the methods defined in the degree programme teaching regulations.

English language skills are also required to at least level B1 of the Common European Framework of Reference for Languages.

- **Admission modalities:**

Admission to the Master's Degree is permitted to students holding a degree belonging to the classes indicated in the admission requirements or to a degree programme belonging to a different class having acquired at least 36 CFU/ECTS distributed in the following subject groups:

- Naturalistic and environmental area (at least 24 CFU/ECTS):  
BIO/01...19, GEO/01...12, AGR/07, AGR/11, AGR/13, AGR/14, AGR/16, VET/01, VET/02, VET/07, ICAR/03
- Mathematics, computer science and physics area (at least 6 CFU/ECTS):  
MAT/01...09; INF/01; ING-INF/05; FIS/01...08, SECS- S/01/02, MED/01
- Chemical area (at least 6 CFU/ECTS):  
CHIM/01...12

Credits acquired in subject groups other than those indicated may be evaluated as equivalent on the basis of the contents.

- **Assesment of personal competences and skills:**

In the absence of a degree qualification or of the credits indicated in the previous paragraph, admission to the Master's Degree Course is permitted only to those who demonstrate the required knowledge and skills, assessed by a Examination Commission through the analysis of the curriculum and an interview (in person or online) according to the methods, criteria and procedures established by the Degree Programme Board and published on the University portal. In case the Commission deems the level of knowledge and skills and the adequacy of the graduate's personal preparation to be sufficient, it expresses a judgment of eligibility, which allows enrolment in the Master's Degree Course in Science and Technologies for Environmental Sustainability.

- **Assesment of linguistic skills – Verification of English language knowledge**

For students enrolled in the italian curriculum Analisi e Gestione dell'Ambiente (AGA) is requested a B1 level of English knowledge of the Common European Framework (CEFR), while admission to the curriculum Water Costal Management (WACOMA) is subject to proving at least a B2 level.

Knowledge of English language is verified through the submission of an official certificate and/or a proficiency test.

## **ART. 2 MOBILITY RULES BETWEEN DEGREE PROGRAMME CURRICULA. INDIVIDUAL STUDY PLANS**

It is not possible to submit individual Study Plans and it is not permitted to switch between the available curricula, except for exceptional and duly motivated reasons, approved by the Degree Programme Board.

## **ART. 3 IMPLEMENTATION OF LEARNING ACTIVITIES AND TYPES OF TEACHING ACTIVITIES**

The attached course structure diagram indicates all the learning activities and their division into hours of classroom teaching, practical exercises or internship, as well as the type of teaching methods. Any further information will be published annually on the University website.

## **ART. 4 ATTENDANCE AND COURSE UNIT PREREQUISITES**

Compulsory attendance is specified in the attached course structure diagram, as well as any prerequisites for individual course units. Methods of verification of the attendance requirement, if applicable, are established annually by the Degree Programme Board when presenting the teaching planning and are made known to students before the start of lessons via the University Portal.

## **ART. 5 PART-TIME STUDENT STATUS**

Students can choose to enroll as a part-time student that allows to complete the degree programme in a longer or shorter time than the standard duration (2 years for Second Cycle degree programmes), according to the procedures defined in the University Teaching Regulation.

In case of necessary deactivation, learning activities provided by the degree programme can be replaced to guarantee the quality and sustainability of the programme catalogue.

## **ART. 6 ASSESSMENT OF LEARNING ACTIVITES**

The attached course structure diagram defines cases in which the learning activities end with an exam marked (with a score out of 30) or by a "pass".

The assessment methods (oral, written or practical exam or any combination thereof; individual or group exams) are established annually by the Degree Programme Board during the presentation of the teaching planning and are notified to the students via the University Portal prior to start of the programme.

## **ART. 7 ELECTIVE LEARNING ACTIVITIES**

Students may autonomously select one or more learning activities among those offered by the degree programme and available in the attached course structure diagram.

If students intend to sit exams concerning an activity that is not included among those available in the course catalogue, they should submit and official request to the Degree Programme Board in the terms established annually and published on the University website. The Board will assess the coherence of the choice with the student's study programme.

## **ART. 8 CRITERIA FOR THE RECOGNITION OF CREDITS ACQUIRED IN DEGREE PROGRAMMES IN THE SAME CLASS**

The acquired university credits are recognised up to the number of credits of the same subject group provided by the Degree Programme Regulations

If, after credits have been recognised as provided for in this regulation, there are unused credits remaining, the Degree Programme Board may recognise them by evaluating the specific case in coherence with the teaching and cultural affinities.

With reference to the WACOMA international curriculum taught in English, the recognition will only concern the teaching and the training activities carried out in English.

## **ART. 9 CRITERIA FOR THE RECOGNITION OF CREDITS ACQUIRED WITHIN DEGREE PROGRAMMES IN DIFFERENT CLASSES, FROM TELEMATIC UNIVERSITIES OR INTERNATIONAL DEGREE PROGRAMMES**

The acquired credits are recognised by the Degree Programme Board on the basis of the congruence of the subject groups and the content of the learning activities in which the student has acquired the credits with the specific learning outcomes of the Degree Programme and of the single learning activities to be recognized, pursuing in any case the purpose of student mobility.

Recognition is carried out up to the number of university training credits required by the Degree Programme Regulations of the Course.

If, after credits have been recognised as provided for in this regulation, there are unused credits remaining, the Degree Programme Board may recognise them by evaluating the specific case in coherence with the teaching and cultural affinities.

## **ART. 10 CRITERIA FOR THE RECOGNITION OF EXTRA-UNIVERSITY COMPETENCIES AND SKILLS**

Competences acquired outside University may be recognised in the following cases:

- professional knowledge and skills certified in accordance with the terms of the applicable laws;
- competences and skills acquired in post-graduate learning activities run or planned by the University.

The request for recognition will be assessed by the Degree Programme Board, taking into account the indications of the Academic Bodies and the maximum number of recognisable credits determined in the Degree Programme Regulations.

This recognition is subject to the activities being coherent with the specific learning outcomes of the Degree Programme and of the learning activities which are recognised, also in consideration of the contents and duration of the activity.

## **ART. 11 INTERNSHIPS FOR THE PREPARATION OF THE FINAL EXAMINATION OR LINKED TO A PROJECT AIMING TO DEVELOP LEARNING AND ACADEMIC SKILLS**

At the student's request, the Degree Programme may, following the procedures laid down in the University Regulations concerning internships and international mobility programmes, and in compliance with EU laws, authorize an internship for the preparation of the final examination or, in any case, linked to a project aimed at developing learning and academic skills.

These learning experiences shall not exceed 6 months, and shall be completed by the date of graduation. Credits for their recognition may be awarded:

- within the quota for the final examination;
- for the internship activities laid down in the course structure diagram;
- for additional activities, whose credits exceed the number required for graduation.

## **ART. 12 PREPARING THE FINAL EXAMINATION**

### **• Characteristics of the Final Examination**

The final examination of a Second Cycle Degree Programme consists in the production and public discussion of an original dissertation based on a topic that is consistent with the programme objectives, under the guidance of a supervising professor.

The dissertation must demonstrate the student's ability to work independently and to clearly and fully present and discuss the results of an original research project, of an experimental or theoretical nature, on a specific topic.

### **• Procedure for carrying out the Final Examination**

The thesis can be written in Italian or English.

The title of the thesis must be submitted at least six months before the discussion and must be approved by the Degree Programme Board. The preparation of the thesis is carried out under the supervision of a professor supervisor from Unibo and is discussed in a cross-examination with a counter-supervisor chosen from among the members of the Degree Programme Board.

The course structure diagram allows students to choose the preparation of the final exam in Italy or abroad or, alternatively, an internship for the thesis in Italy or abroad.

The discussion of the thesis takes place with the support of a power point presentation lasting 30 minutes. Score: 9 points can be awarded: 4 of which are available to the Supervisor, 3 to the Counter-Supervisor and 2 to the Commission. Students who have participated in 14 'Thursday Seminars' organized and certified by the Degree Programme are entitled to 1 additional point on the final grade.

**ART. 13 CORRESPONDENCE BETWEEN THE CREDITS ASSIGNED TO EACH LEARNING ACTIVITY AND THE PLANNED LEARNING OUTCOMES**

On 16/12/2022 the Joint Teacher-Student Committee expressed its favourable opinion under the terms of article 12 para. 3 of Ministerial Decree no. 270/04.

COASTAL ZONE

CON GEO/05 6 32/20/0/0 No Voto

Ambito: 402 - Discipline di scienze della Terra B

Obiettivi: At the end of this course the student will achieve a quantitative understanding of the components of the hydrological cycle and how these components are measured (or calculated) and influence each other with special emphasis to coastal zone settings. By working on a specific project, the student will learn the physical processes, problems, management challenges, adaptation strategies, and feedback mechanisms important for water resources use in the coastal zone. Other topics include: the relationships among water resources and climate change, extreme events and flood hazards, human activities, such as gas and water extraction, land subsidence, loss of freshwater, land reclamation, drainage and salt-water intrusion, urbanization and loss of groundwater recharge, quarrying and mining activities. Moreover, the student will be introduced to the principles of density-dependent groundwater modelling for coastal aquifer.

Ambito: 1278 - Discipline agrarie, tecniche e gestionali B

Obiettivi: The course aims to enhance and consolidate the level of knowledge of planning and decision making with reference to water and coastal management, with an emphasis on principles and tools in ICZM. The main connectivity and interactions between physical-geometric, natural and socio-economic data to manage the coastal areas will be discussed. At the end of the course, the student will learn the main aspects of coastal zone, be able to identify threats on coastal resources associated with human activities and understand planning and decision making with reference to water and coastal management. The student will be

introduced to the application of decision-support tools that aid in the evaluation and assessment of water and coastal systems and can be used to guide decision-making efforts from process to strategic level.

F

**Obiettivi:** The fieldwork, performed at the end of the first year, is a truly interdisciplinary experience for students, who will take advantage of a direct interaction with professors from different fields as well as responsibles in charge of coastal management and preservation. The experience will foster (1) an understanding of the main natural and anthropogenic drivers of the evolution of coastal environments, including both biotic and abiotic components; (2) the ability to analyze resource and management problems in coastal areas; (3) a conceptual understanding of preservation and restoration solutions. Attendance is mandatory.

Absence from the fieldwork will be granted only in the event of medical or family emergencies, which must be documented and communicated to the organizers. At the end of the experience, readings on topics related to the fieldwork will be assigned and students will be divided into groups. A critique report on the management activities observed during the fieldwork will be required from each group and a final general discussion will be performed in class.

Attività formativa	TIP	SSD	TAF	CFU	ORE F/E/L/N	FREQ.	VER.
5900 000 000 37358 - 0 - ANALISI CHIMICA DELLA QUALITA' AMBIENTALE Ambito: 051 - Discipline chimiche B	CON	CHIM/01	6	40/0/12/0	No	Voto	
Obiettivi: Al termine del corso, lo studente possiede una conoscenza sulle misurazioni chimiche necessarie per valutare la qualità dell'ambiente. È in grado di comprendere ed applicare le metodologie per il monitoraggio chimico degli inquinanti nei vari compatti ambientali, i criteri per valutare l'affidabilità dei dati di concentrazione e gli strumenti per interpretarli in relazione alla composizione chimica delle matrici (aria, acqua, suolo), alle fonti della contaminazione ed ai possibili effetti sull'ambiente.							
5900 000 000 37361 - 0 - FISIOLOGIA APPLICATA ALL'AMBIENTE Ambito: 042 - Discipline biologiche B							
Obiettivi: Al termine del corso, lo studente possiede conoscenze sull'interazione organismo-ambiente e conoscenze teorico-pratiche necessarie a misurare e prevedere gli effetti delle attività antropiche sugli organismi viventi a livello molecolare, cellulare e di individuo. Su queste basi, è in grado di applicare indicatori di qualità ambientale, ed utilizzare i dati ambientali ed epidemiologici nell'ambito della valutazione del rischio.							
5900 000 000 37364 - 0 - IDROLOGIA AMBIENTALE Ambito: 402 - Discipline di scienze della Terra B	CON	GEO/03	6	32/10/12/0	No	Voto	

Obiettivi: Fornire gli elementi di base per comprendere le interazioni fra idrosfera e ambiente, l'idrodinamica fluviale, il flusso delle acque sotterranee, la dispersione degli inquinanti, l'idro-geochimica e la gestione delle acque nell'ambito della legislazione vigente a livello europeo (Water Framework Directive). Oltre che tramite lezioni frontali, la formazione sarà raggiunta tramite l'utilizzo di modelli analitici e numerici sviluppati al computer e con prove in campagna.

5900 000 000 58305 - 0 - LABORATORIO

6 8/0/60/0 No Giudizio

INTERDISCIPLINARE

Ambito: 1147 - Altre conoscenze utili per l'inserimento nel mondo del lavoro F

Obiettivi: Al termine dell'attività, lo studente è in grado di affrontare una specifica problematica ambientale con un approccio sperimentale multidisciplinare ed integrato utilizzando tecniche di analisi chimiche, fisiche, ecologiche, biologiche e geologiche e fornendo una rappresentazione territoriale dei dati ottenuti sia individualmente che in gruppo.

5900 000 000 55012 - 0 - LEGISLAZIONE

CON IUS/10

6 48/0/0/0 No Voto

AMBIENTALE

Ambito: 1277 - Discipline giuridiche, economiche e valutative B

Obiettivi: Al termine del corso, lo studente possiede conoscenze approndate sulle principali tematiche del diritto ambientale, in particolare sulla tutela dell'aria, delle acque, gestione dei rifiuti e bonifica dei siti contaminati. Conosce inoltre la disciplina dei principali sistemi di certificazione in materia ambientale. Lo studente è in grado di risolvere le problematiche giuridiche ambientali relative alle diverse forme di inquinamenti.

5900 000 000 37362 - 0 - METODI ECOLOGICI PER L'ANALISI E LA  
GESTIONE DELL'AMBIENTE

CON BIO/07

6 48/0/0/0 No Voto

Ambito: 069 - Discipline ecologiche B

Obiettivi: Al termine del corso, lo studente possiede conoscenze teoriche e pratiche necessarie a misurare e prevedere gli effetti delle attività antropiche su popolazioni, comunità ed ecosistemi e a sintetizzare le informazioni secondo modalità utili ai fini della gestione dell'ambiente.

E' in grado di: applicare metodi di monitoraggio e indicatori di qualità dell'ambiente basati su caratteristiche strutturali e funzionali di popolazioni, comunità, ecosistemi; valutare l'ecotossicità delle sostanze; integrare informazioni di diversa natura, nel quadro di approcci "weight of evidence"; effettuare valutazioni di rischio ecologico, sia predittive che retrospettive, con particolare riguardo all'analisi degli effetti ecologici dei contaminanti e di altri agenti di stress; discriminare la variabilità naturale dall'alterazione antropica e valutare l'impatto delle attività umane sui sistemi ecolgici, applicando opportuni disegni di campionamento.

5900 000 000 94443 - 0 - MONITORAGGIO E PIANIFICAZIONE DEL TERRITORIO

GEO/04

6 32/20/0/0 No Voto

Ambito: 402 - Discipline di scienze della Terra B

Obiettivi: Al termine del corso, lo studente possiede le conoscenze di base indispensabili per inquadrare, definire e sviluppare la pianificazione ambientale del territorio ("Environmental land use planning"). Conosce i riferimenti alle linee guida internazionali (Ramsar, ICZM, ecc.) e i principali strumenti di pianificazione territoriale nazionale (PTRC, PTCP, Piani regolatori generali, Piani particolareggiati, Piani settoriali). Lo studente è in grado di utilizzare i fondamentali strumenti di georeferenziazione e restituzione cartografica. Conosce inoltre i più recenti programmi europei ed internazionali di monitoraggio del territorio tramite telerilevamento e i principali processi che, partendo dal dato telerilevato (aereo e satellitare), portano alla cartografia tematica (es. uso del suolo).

5900 000 000 99107 - 0 - SCIENZA DEI DATI PER L'AMBIENTE CHIM/02

6 32/0/24/0 No Voto

Ambito: 051 - Discipline chimiche B

Obiettivi: Conoscere e sapere applicare principali metodi di analisi e di modellazione di dati monovariati, bivariati e multivariati. Obiettivi inglese: Knowledge of the

main topics of analysis and modelling of univariate, bivariate and multivariate data.

Gruppo: 2) Corso opzionale
