16 May 2019 – Venice, Italy – Do energy efficiency standards hurt consumers?  
Evidence from household appliance sales

Researchers built novel welfare-based price indices for major household appliances that leverage changes in same-model prices and how consumers substitute between existing, continuing and new models. They then evaluated how minimum energy efficiency requirements and changing criteria for Energy Star labels affected these indices in the US between 2001 and 2011, a period of time when some appliances experienced standard changes while others did not.
